COURSE OUTCOMES FOR B.PHARMACY

			B-PHARMACY I SEMESTER (I YEAR) (PCI Regulation)
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Get knowledge on different cells and tissues was involved in the formation of organs and its different functions in human body.
		2	Get knowledge on different parts, composition and its functions of skin, skeletal system and joints.
Human Anatomy and Physiology-I		3	Get knowledge on cellular composition and non cellular compositions of Blood and how it is involved in oxygen and carbon dioxide transport,
(Theory)	BP101 T	5	maintenance of B.P, defense immunity and excretion.
(Theory)		4	Have knowledge on parts and functions of nervous system and special senses, their coordination in regulation of homeostatic mechanisms and their
		-	imbalances.
		5	Have knowledge on external and internal characters of Heart and blood vessels maintain BP, transport gases, nutrients and waste products. Their
		5	function is essential to sustain life.
			Upon completion of the course student will be able to
		1	Get knowledge on instruments used in experimental human anatomy and Physiology its operation.
Human Anatomy and Physiology- I		2	Know differences like structural composition and functional nature of different living cells and tissues using reference slide.
(Practical)	BP107P	3	Know location, structural features of skeletal system in the body.
(Tractical)		4	Know principles and procedures involved in heamotology and heamocytometry.
		5	Get knowledge on instruments used in experimental heamocytometry and heamatology its operation.
		6	Have idea about heamotological parameters and its physiological importance to diagnose disease in the body.
		7	Know about physiology of heart and their coordinated functions using instruments for diagnosis of diseases.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
			Discuss the fundamentals of volumetric analysis and illustrate the sources of errors in analytical techniques methods to minimize them, use different
	BP102T	1	methods to express concentration.
Pharmaceutical Analysis-I			Employ different theories (Indicator theory, Law of mass action, Henderson hasselbach equation) in acid base titration and distinguish from Non
Pharmaceutical Analysis-I		2	aqueous titration.
2			TS
(Theory)			Demonstrate adequate knowledge on basic principles and techniques in complexometry and precipitation titrations. Understand and explain the
2		3	difference between precipitation and gravimetric analysis.
2		4	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions.
2			difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis.
2		4 5	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to
2		4 5 1	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic.
(Theory)		4 5 1 2	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic. Generalize the apparatus and glassware used in analytical chemistry.
(Theory) Pharmaceutical Analysis- I	BP108 P	4 5 1	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic. Generalize the apparatus and glassware used in analytical chemistry. Prepare and standardize primary and secondary standard solutions of various Normality and Molarity.
(Theory)	BP108 P	4 5 1 2	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic. Generalize the apparatus and glassware used in analytical chemistry. Prepare and standardize primary and secondary standard solutions of various Normality and Molarity. Articulate the principle, Reaction conditions and factor calculation for data analysis for various volumetric methods of analysis and application of
(Theory) Pharmaceutical Analysis- I	BP108 P	4 5 1 2 3 4	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic. Generalize the apparatus and glassware used in analytical chemistry. Prepare and standardize primary and secondary standard solutions of various Normality and Molarity. Articulate the principle, Reaction conditions and factor calculation for data analysis for various volumetric methods of analysis and application of pharmacopoeial purity.
(Theory) Pharmaceutical Analysis- I	BP108 P	4 5 1 2 3 4 5	difference between precipitation and gravimetric analysis. Clarify different terms and principles of Oxidation and reduction reactions. Well acquainted with principles of electro chemical methods of analysis. Upon completion of the course student will be able to Perform limit tests for chlorides, sulphates, Iron, Arsenic. Generalize the apparatus and glassware used in analytical chemistry. Prepare and standardize primary and secondary standard solutions of various Normality and Molarity. Articulate the principle, Reaction conditions and factor calculation for data analysis for various volumetric methods of analysis and application of

Understand the professional way

		3	Understand about the preparation of various conventional dosage forms like monophasic and biphasic liquid dosage forms.	
		4	Know the preparation of suppositories and understand various pharmaceutical incompatibilities.	
		5	Understand the preparation of various semisolid dosage forms and their evaluations.	
		5	Upon completion of the course student will be able to	
		1	Gain skill in the operation of common pharmaceutical measuring, weighing and compounding devices.	
		2	Perform dispensing of mixtures, solutions, emulsions, creams and ointments	
Pharmaceutics I (Practical)	BP109P	3		
Pharmaceutics I (Practical)	BF109F	-	Perform dispensing of powders, pastes, lotions, liniments, inhalations and paints.	
		4 5	Identify incompatibilities in prescription and dispensing of such prescriptions.	
		÷	Perform dispensing procedures involving pharmaceutical calculations.	
		5	Perform dosage calculations for pediatric and geriatric patients.	
		6	Dispense the prescriptions involving adjustment of tonicity.	
Course	Course Code	Course Outcome Number	Course Outcome	
			Upon completion of the course student will be able to	
		1	Understand the history of pharmacopoeia, sources and types of impurities and describe the official methods of control like limit tests.	
			Acquires knowledge on acids, bases, buffers, buffered isotonic solutions, methods of adjusting isotonicity and major extra and intra cellular electrolytes and know	
Pharmaceutical Inorganic	BP104 T	2	the monographs of dental products.	
Chemistry (Theory)	DI 104 I		Classify the gastrointestinal agents and described the methods of preparation, properties, storage, assay and uses with marketed formulations of inorganic	
		3	compounds in gastrointestinal agents.	
		4	Classify the miscellaneous compounds and know the monographs of inorganic compounds in each category.	
		5	To understand the radioactivity and study of different radioisotopes, storage, precautions and applications of radioactive substances.	
			Upon completion of the course student will be able to	
Pharmaceutical Inorganic		1	Identify impurities from pharmaceutical substances	
Chemistry (Practical)	BP110P	2	Apply the skills of qualitative analysis of unknown samples	
Chemistry (Flactical)		3	Compute, quantitate and record purity of inorganic pharmaceuticals	
		4	Develop mathematical approach to calculate quantitative parameters for synthesized compounds.	
		4	Develop manematical approach to calculate quantitative parameters for synthesized compounds.

			Upon completion of the course student will be able to
		1	Get knowledge on instruments used in experimental biology and its operation.
		2	Know the Principles and procedures involved in staining techniques for the preparation of slide.
		3	Grasp knowledge on different cellular composition and its importance in living organism.
Remedial Biology (Practical)	BP112RBP	4	Getting knowledge about morphological features and modified morphological features and its importance of different parts of plant.
Temediai Biology (Plaedeal)	DI II2RDI	5	Know about anatomical features and physiological features with reference to human by simulatory model.
		6	Grasp knowledge on different cellular composition of different parts of plant.
		7	Get an overview on different types of blood grouping and its importance.
		8	Know comparison of various respiratory physiological parameters and its importance for diagnosis of disease.
		Course Outcome	they comparison of furbas respiratory physical parameters and its importance for diagnosis of disease.
Course	Course Code	Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know Basic mathematical operations
		2	Know trigonometry mostly used in any sciences.
Remedial Mathematics (Theory)	BP106RMT	3	Draw lines, finding the equations for the purpose of relational study
		4	Know Basic calculus which is used in analytical study of their life sciences applications
		5	Know Some advanced calculations in Research or Project works
		6	Enrich analytical skills in research study
			B-PHARMACY IISEMESTER (I YEAR) (PCI Regulation)
		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon completion of the course student will be able to
		1	Get knowledge on parts of Brain and neurons their involvement in sensory and motor functions including pain persumption, sleep wake cycle,
			cognitive skills, memory, behavior, governance, Chemical Mediators like Acetyl choline, Serotinine, Dopamine, Noradrenaline, glutamic acid, gaba
			involvement in transmission of impulse and disorders due to their changes.
		2	Get knowledge on the digestion in various parts of GIT, enzymes and secretions involved – their functions.
Human Anatomy and Physiology II	BP201T	3	Get knowledge on external and internal characters of respiratory system and external and internal respiration exchanging of gases, need for oxygen for
(Theory)	BP2011		metabolism of nutrients and generation of energy and is essential for life process, parts of urinary system and how urine is formed and various
			mechanisms involved in formation of urine.
		4	Know external and internal characters of various endocrine glands and their functions like Growth, reproduction and metabolism depend on
			hormonal activity. Their imbalance leads to disorders and some of them cannot be rectified.
		5	Get knowledge about parts of reproductive system andConcept of male & female hormones, Characters, sex cell maturity, reproductive period,
			copulation and pregnancy, parturition, concept of pregnancy, menopause and their care.
			Upon completion of the course student will be able to
		1	Get knowledge on instruments used in experimental Physiology its operation.
Human Anatomy and Physiology II	BP207 P	2	Know differences like structural composition and functional nature of different living cells and tissues in skin and its role.
(Practical)	512071	3	Know location, structural features of nervous system and endocrine system in the body.
		4	Describe principles and procedures involved in sensory performances in the body.
		5	Get knowledge on instrumental techniques used in experimental body temperature recording.
		6	Know mechanisms involved in homeostasis for protection of body.
Course	Course Code	Course Outcome	Course Outcome
course	course coue	Number	
			Upon completion of the course student will be able to
		1	Familiar with structure, nomenclature and isomerism of organic compounds.
Pharmaceutical Organic Chemistry	DDC =	2	Understand preparations, reactions , properties, orientation of reactions.
I(Theory)	BP202T	3	Understand nucleophillic substitutions, reactivity and stability of various organic compounds. It also account for various qualitative test for the
			identification of compounds.
		4	Acknowledge the mechanisms for named reactions and structure, uses of pharmaceutically active compounds.
		5	Know brief information on preparation, properties, identification test for compounds.
		L	Upon completion of the course student will be able to
Pharmaceutical Organic Chemistry	BP208P	1	Perform functional group analysis for organic compounds, melting point & boiling point determination.
I (Practical)		2	Prepare suitable solid derivatives from organic compounds.

			Perform molecular models.
Course	Course Code	Course Outcome Number	Course Outcome
		1	Upon completion of the course student will be able to
		1	Understand the biological role of carbohydrates, lipids, nucleic acids, amino acids and proteins.
	DD202 T	2	Know the concepts of carbohydrate metabolism, electron transport chain and oxidative phosphorylation.
Biochemistry (Theory)	BP203 T	3	Understand the Catabolism of lipids and aminoacids and their related disorders
		4	Gain knowledge on metabolism of nucleic acids and and genetic information transfer
		5	Have cognizance of enzyme kinetics, regulation of enzymes, therapeutic and diagnostic applications of enzymes
			Upon completion of the course student will be able to
		1	Perform qualitative analysis of carbohydrates and identification tests for proteins
		-	Perform quantitative analysis of reducing sugars and proteins, and qualitative analysis of urine for abnormal constitutents.
Biochemistry (Practical)	BP209 P	3	Determine blood creatinine and blood sugar
Biochemistry (Fractical)	DI 207 I	-	Determine serum total cholesterol
			Analyze enzymatic hydrolysis of starch and can determine Salivary amylase activity
		-	
		6	Determine the effect of temperature on salivary amylase activity and effect of substrate concentration on salivary amylase activity
Course	Course Code	Course Outcome Number	Course Outcome
		4	Upon completion of the course student will be able to
		1	Describe abnormal physiologic processes associated with common disease processes
		_	Explore the most common etiologies and predisposing factors associated with human disease.
Pathophysiology (Theory)	BP204T		Identify the mechanisms that cause alterations in hormone secretion
Tamophysiology (Theory)	DI 2041	-	Identify the classification of tumors and stages of cancer spread. Explain the difference between benign and malignant neoplasms
		5	Describe the structure and function of cells and tissues, Cellular adaptations that result from environmental stresses.
		6	Explain age-related differences in physiologic and patho physiologic processes and their clinical manifestations.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know various types of application of computers in pharmacy.
Commuter Analisetions in		2	Know the various types of databases.
Computer Applications in	BP205T	3	Know the various applications of databases in pharmacy
Pharmacy (Theory)			Familiar with overview of the computers and MS-office
		4	
		4 5	
		5	Familiar with internet, WWW, browsing, HTML & e-mails.
		5	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management
		5	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to
		5 6	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table
Computer Applications in	BP210P	5 6 1	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports
Computer Applications in Pharmacy (Practical)	BP210P	5 6 1 2	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages
	BP210P	5 6 1 2 3	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy.
	BP210P	5 6 1 2 3 4	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy. Know various types of databases and its applications in Pharmacy
	BP210P	5 6 1 2 3 4 5	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy.
	BP210P Course Code	5 6 1 2 3 4	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy. Know various types of databases and its applications in Pharmacy
Pharmacy (Practical)		5 6 1 2 3 4 5 Course Outcome Number	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy. Know various types of databases and its applications in Pharmacy Store the drug information in the database and how to retrieve the information of a drug
Pharmacy (Practical)		5 6 1 2 3 4 5 Course Outcome Number	Familiar with internet, WWW, browsing, HTML & e-mails. Familiar with Database management Upon completion of the course student will be able to Use MS Word, MS Access for designing questionnaire, form to record patient information, creating patient database, mailing labels, invoice table and generate reports Create HTML web page, Export Tables, Queries, Forms and Reports to web pages and XML Pages Know the various types of application of computers in pharmacy. Know various types of databases and its applications in Pharmacy Store the drug information in the database and how to retrieve the information of a drug Course Outcome
Pharmacy (Practical)		5 6 1 2 3 4 5 Course Outcome Number	Familiar with internet, WWW, browsing, HTML & e-mails. Know the different natural sources and their conservation to save the environment. Know the current problems of environment and how to solve them, Role of individual in conservation of environment and natural resources.

Course	Course Code	Course Outcome Number	Course Outcome
Dhamaan tiad Qaan is Chamistra			Upon completion of the course student will be able to
		1	Brief information of orbital structure, resonance and reactions of benzene. It also includes detailed information on electrophillic substitution reactions.
Pharmaceutical Organic Chemistry II (Theory)	BP301 T	2	Acquire knowledge on methods of preparations, reactions, acidity and test for the determination of phenols and amines.
ii (Theory)		3	Emphasise on rancidity of oils to determine the best oils.
		4	Acknowledge synthesis, reactions of polynuclear hydrocarbons
		5	Familiar with synthesis, reactions of cycloalkanes and it accounts for Bayer's strain & Mohr's theories.
			Upon completion of the course student will be able to
Pharmaceutical Organic Chemistry		1	Perform Recrystallisation & Steam distillation
II (Practical)	BP305P	2	Determine Acid value, Saponification value, Iodine value, as a result they can have knowledge on rancidity of oils and able to determine best oil.
		3	Know preparation and synthesis of various pharmaceutically active organic compounds.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand and describe the principles, energetics of adsorption at liquid interfaces, to apply the electrical properties of interfaces and parameters relevance to pharmacy
Physical Pharmaceutics I (Theory)	BP302 T	2	Describe the relationship between activity co efficient and the buffer equations knowing the factors influencing the pH of the solution and Calculate solution's tonicity adjustments
		3	Illustrate the utility of super critical fluids and to appreciate the differences in the strength of the inter molecular forces and types of states of matter
		4	Define saturated solution, solubility and unsaturated solutions with complete knowledge on partial miscibility
		5	Classify the complexes and determining the methods of analysis of complexes
	BP306 P		Upon completion of the course student will be able to
		1	Determine the Surface tension of given liquids by drop count and drop weight method
Physical Pharmaceutics I		2	Determine the HLB Number of Surfactants by Saponification method with the determination of freundlich and langmuir constants by using activated charcoal
(Practical)	B1 500 1	3	Demonstrate the calibration of pH and determine the pH by half neutralization method
		4	Determine the critical solution temperature by phenol water system
		5	Determine the solubility of drug at room temperature with partition coefficient of benzoic acid and Iodine in different Solvent media
		6	Determine the stability constant and donor acceptor ratio of PABA CAFFEINE and Cupric chloride Glycine
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Acquire the knowledge about the different characteristic of prokaryotics, eukaryotics organism, the methods of identification, cultivation and preservation of organisms.
Pharmaceutical Microbiology	BP303 T	2	Describe the importance and implementation of sterilization and staining methods
(Theory)		3	Define the disinfectant, antiseptic, bactriostatic, bactericidal and their factors influencing, evaluation methods. Describe the strility testing of pharmaceutical products
		4	Demonstrate the design of asaptic area, laminar chamber and microbiological standardization of pharmaceuticals
		5	Understand the microbial spoilage, contamination and their assessment. Cell culture technology and their application
			Upon completion of the course student will be able to
		1	Understand the different equipments and processing used in experimental microbiology
Pharmaceutical Microbiology	BP307 P	2	Determine the sterilization of glassware, preparation, sterilization of media, sub culturing of bacteria and fungus. Nutrient stabs and slants preparations
(Practical)		3	Perform the methods of Simple, Gram's staining and acid fast staining
		4	Isolate the pure culture of micro-organisms by multiple streak plate technique
		5	Determine the Microbiological assay of antibiotics by cup plate method, Motility determination by Hanging drop method
		6	Analyse the sterility testing of pharmaceuticals, Bacteriological analysis of water and biochemical test.
Course	Course Code	Course Outcome Number	Course Outcome

			Upon completion of the course student will be able to
			Understand fluid flow concepts – Reynold's number, viscosity, measurements of flow and pressure, theories and mechanisms involved in size
		1	reduction and size separation.
			Understand evaporation process, theory of evaporation- and Evaporators used in pharmaceutical industry, principles and theory of Heat flow transfer
Pharmaceutical Engineering	BP304 T	2	through Conductions, Convection and Radiation mechanisms and various distillation equipments.
(Theory)	DI 504 I		Understand procurement of information regarding drying, Moisture content, types of dryers -their construction, working and applications and able
		3	to understand the concept of mixing mechanisms of solid-solid, solid-liquid & liquid-liquid and about various mixing equipments.
		4	Understand the concept of mixing internations of sond-sond, sond-require a requirement and about various mixing equipments.
		5	Understand various types of materials used for plant construction and to appreciate preventive methods used for corrosion.
		5	Upon completion of the course student will be able to
			Handle Ball mill equipment and calculate the energy requirement for the powders by the milling equipment.
		1	Carryout particle size reduction by Ballmill and calculate efficiency, critical speed and optimum speed of Ball mill.
			Determine Reynold's number at different heads (low, medium, high) by using Reynold's apparatus. Handle sieve shaker apparatus and perform size
			separation for the given powders.
Pharmaceutical Engineering	BP308 P	2	Determine various factors effecting on Rate of evaporation like surface area, viscosity and temperature. Demonstrate the simple distillation
(Practical)	Dr 508 r		apparatus.
			Determine moisture content and loss on drying.
		3	Effect of temperature on Rate of drying.
			Determine the Mixing index for solid-solid mixing.
			Construction of drying curves (for calcium carbonate and starch). understand the effect of Filter aids on the rate of filtration
		4	understand the effect of Filter ands on the rate of intrauon
			B.Pharmacy IV Semester (II year) (PCI Regulation)
		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon completion of the course student will be able to
		1	Acquire knowledge on Stereo-chemical aspects, dextro and levo rotatory isomers.
Pharmaceutical Organic Chemistry		2	Know detailed information on conformational isomers, stereo-selective and stereo-specific reactions.
III (Theory)	BP401 T	3	Familiar with synthesis, reactions, relative aromaticity of various heterocyclic compounds
· •		4	Know synthesis, reactions and uses of heterocyclic compounds.
		5	Brief information on mechanisms of various naming reactions.
	Course Code	Course Outcome	Course Outcome
		Number	
		1	Upon completion of the course student will be able to
		1	Familiar with physic-chemical properties of drugs which influences biological action and drug metabolism pathways.
Medicinal Chemistry I (Theory)	BP402 T	2	Familiar with chemistry along with pharmacological action of sympathomimetic drugs.
		3	Know detailed information of metabolic pathways, therapeutic uses, mechanism of parasympathomimetic drugs.
		4	Acknowledge mechanism of various drugs and SAR of drugs acting on CNS.
		5	Get knowledge on chemistry and pharmacological actions of narcotics and anti-inflammatory drugs.
			Upon completion of the course student will be able to
Medicinal Chemistry I (Practical)	BP406P	1	Prepare and synthesize various pharmaceutically active organic compounds.
		2	Perform assay of drugs in order to determine the percentage purity.
		3	Determine the partition coefficient of two drugs.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Annotate the principles of characteristics of powdered particles, classify and execute the different methods of particle size and its derived properties
Physical Pharmaceutics II (Theory)	BP403T	2	Describe the settling and sedimentation theory and calculate sedimentation rates , define emulsions and its theories with formulation and stability
		3	Define the concepts of colloids and its phases and types with the application of its properties like optical, kinetic and electrical
			is the concepts of conords and no phases and types with the approximation of its properties like optical, kinetic and electrical
		4	Demonstrate the concepts and factors influencing the viscosity of liquid and explain the Rheology of fluids

		5	Calculate the expiration date of different dosage forms and describe the accelerated stability studies
			Upon completion of the course student will be able to
		1	Determine the Particle size and its distribution by using Optical microscopy and sieving methods
		2	Determine and report the derived properties of powder and angle of repose
Physical Pharmaceutics II	DD407D		
(Practical)	BP407P	3	Explain and determine the Methods of sedimentation volume by using the different suspending agents and concentration of same suspending agents.
		4	Demonstrate the concepts of viscosity and determine the viscosity of liquids and semi solids by using ostwald's viscometer and Brookfield viscometer
		5	Determine the reaction rate constants by first and second order reactions by using graphical and substitution methods
		6	Calculate the expiration date of different dosage forms and describe the accelerated stability studies
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know basics of pharmacology like history, scope, general principles & Pharmacokinetics.
Dhamma a sha say I (Tha am)	DD404T	2	Know basic concepts of Pharmacology, mechanism of action of drugs, Receptors, drug discovery, preclinical & clinical trails.
Pharmacology I (Theory)	BP404T	3	Describe the basics of physiology and neurotransmitters and their roles. To gain knowledge on the drugs acting on ANS and muscle relaxants.
		4	Understand the role of neurotransmitters in the CNS and pharmacology of various classes of drugs acting on CNS.
		5	Impart knowledge on pathophysiology of various disease conditions of the CNS and pharmacology of drugs.
			Upon completion of the course student will be able to
		1	Study of commonly used instruments in experimental pharmacology. Introduction to CPCSEA guidelines and OECD guidelines.
	DD 400D	2	Know introduction to animal physiology with their biochemical reference values in various animal species.
Pharmacology I (Practical)	BP408P	3	Study of various routes of drug administration, anesthetics agents used to anesthetize laboratory animals and techniques of Euthanasia
		4	Study of physiological salt solutions, drug solution and use in various animal experiments.
		5	Study of methods for collection of blood, body fluids and urine from experimental animals.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Familiar with Sources of Crude drugs, and their Quality control methods
Pharmacognosy and	BP405T	2	Demonstrate the concepts and factors influencing Cultivation, Collection and Processing of Crude drugs
Phytochemistry I (Theory)	DI 405 I	3	Explain the concepts of Plant Tissue Culture and its applications in Pharmacy
		4	Acknowledge Alternative systems of Medicine
		5	Get knowledge on Primary and Secondary metabolites
			Upon completion of the course student will be able to
Pharmacognosy and	BP409P	1	Perform Analysis of Crude drugs
Phytochemistry I (Practical)	DI 4091	2	Determine the Leaf Constants
		3	Determine the Physical Parameters of Crude drugs
			B.Pharmacy V Semester (III Year) (PCI Regulation)
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the structure, MOA, SAR, synthesis, uses, and properties of Anti-histaminic agents.
		2	Understand the structure, MOA, SAR, synthesis, uses, and properties of Gastric proton pump inhibitors.
		3	Understand the structure, MOA, SAR, synthesis, uses, and properties of Antineoplastic agents.
		4	Understand the structure, MOA and uses of Antibiotics and Plant products
Medicinal Chemistry II (Theory)	BP501T	5	Understand the structure, MOA, SAR, synthesis, uses, and properties of Anti-anginal (Calcium channel blockers, Diuretic and Antihypertensive agents)
		6	Understand the structure, MOA, SAR, synthesis, uses, and properties of Anti-arrhythmic drugs (Anti-hyperlipidemic agents, Coagulant & Anticoagulants and Drugs used in congestive heart failure)
			Understand the structure, MOA, SAR, synthesis, uses, and properties of Drugs acting on endocrine system (Sex hormones, Drugs for erectile
		7	dysfunction, Oral contraceptives, Corticosteroids, Thyroid and Anti-thyroid drugs)
		8	Understand the structure, MOA, SAR, synthesis, uses, and properties of Anti-diabetic agents.
		9	Understand the structure, MOA, SAR, synthesis, uses, and properties of Anti-unabelic agents.

Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Learn about the science behind performing a Preformulation study before formulating a novel drug delivery system.
		2	Understand the advanced drug delivery systems and their applications.
		3	Understand the process of developing a formulation that is both safe and efficient for a patient.
		4	Know very well about orally administered solid dosage forms (Tablets, capsules and pellets) and liquid dosage forms (syrups, elixirs, suspensions and
Industrial PharmacyI- Theory	BP502T		emulsions) with standard protocols.
		5	Know very well about novel drug delivery systems like parenterals, ophthalmic preparations and pharmaceutical aerosols with standard protocols.
		6	Understand about basics and legal aspects of cosmeticology and various formulations like dentifrices, lipsticks, nail polish and baby products etc.
		7	Understand how to select a suitable packaging option for the formulated dosage form to store it for extended periods.
		8	Know about the standard stability testing procedures for formulated dosage forms for better storage conditions.
			Upon completion of the course student will be able to
		1	Perform pre-formulation studies for any selected API
		2	Formulate and evaluate tablets using various granulation techniques like (wet, dry and direct compression) with selected APIs
		3	Coat the formulated tablets with appropriate coating solutions.
Industrial PharmacyI (Practical)	BP506P	4	Formulate and dispense hard gelatin capsules with selected APIs.
industria i marinas yr (i rastisai)	DICOOL	5	Formulate some parenteral formulations like calcium gluconate and ascorbic acid injection
		6	Perform quality control tests for the selected marketed tablets
		7	Formulate ophthalmic preparations like eye ointments and eye drops
		8	Formulate and dispense creams like cold cream and vanishing cream
		9	Perform quality control tests for various packaging materials according to IP.
Course	Course Code	Course Outcome	Course Outcome
Course	Course Coue	Number	
			Upon Completion of this course student will able to
		1	Familiarize with the pathophysiology of cardiovascular system and drugs acting on cardiovascular system.
Pharmacology II (Theory)	BP503T	2	Understand the pathophysiology of disease of Hematopoietic system and drugs acting on it.
		3	Explain the pharmacology and rational use of drugs used for the treatment various endocrine disorders.
		4	Have basic knowledge of autocoids.
		5	Describe the principles, applications and types of bioassay, Evaluate the potency of unknown compound with reference to standard
			Upon Completion of this course student will able to
		1	Know principles of bioassay, its types including advantages and disadvantages
	DDS05D	2	Determine the potency of a substance on isolated tissues.
Pharmacology II (Practical)	BP507P	3	Explain the effect of drugs either alone or in combination on isolated frog's rectus abdominus muscle and frog's heart
		4	Explain and perform matching point, bracketing and interpolation bioassay to find unknown concentration of Acetylcholine.
		5	Demonstrate and discuss recording of effects of CNS acting drugs in rats/mice using Actophotometer and anti-epileptic activity using Convulsiometer with the help of software.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon Completion of this course student will able to
		1	Learns about biogenetic studies and significance in drug discovery
Pharmacognosy and		2	Know Chemistry, sources, commercial appplications of alkaloid drugs, volatile oil drugs, terpenoids, flavonoids, tannins, steroids, glycosides, resins
Phytochemistry II (Theory)	BP504T	3	Know Isolation, identification and analysis of phytoconstituents by HPLC etc.
,		4	Understand Industrial production, estimation, and utilization of phytoconstituents
			Use modern methods in extraction, isolation, identification, and purification such as electrophoresis,
		5	spectroscopy, chromatography
		1	
			Upon Completion of this course student will able to
		1	Upon Completion of this course student will able to Learn and exercise techniques of Morphology, histology, powder characteristic, extraction, and detection by TLC or chemical tests of alkaloidal,

1			Learn and exercise techniques involving isolation and detection by TLC or
Pharmacognosy and Phytochemistry II (Practical)	BP508P	2	chemical tests of active principles alkaloids, glycosides, steroids
	Dictor	3	Learn and exercise Seperation of sugars by paper chromatography
		4	Learn and exercise ECC of herbal extract
		5	Learn and exercise Tee of heroar extract Learn and exercise Distillation of volatile oils and detection of phytoconstituents by TLC
		6	Learn and exercise Distination of volatile ons and detection of phytoconstituents by TLC Learn and exercise Analysis of crude drugs-resins and glycosides by chemical tests
		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon Completion of this course student will able to
		1	Understand the Drugs and Cosmetics Act 1940 and its rules 1945.
Pharmaceutical Jurisprudence	DDC0CT	2	Understand about various schedules in the Drugs and Cosmetics Act and will have knowledge on various administrative bodies like DTAB, C DCC etc.
(Theory)	BP505T	3	Know about pharmacy act 1948, Medicinal and Toilet Preparation Act 1955 and Narcotic Drugs and Psychotropic Substances Act 1985 and rules.
		4	Know about Drugs and Magic Remedies Act and its rules, Prevention of Cruelty to Animals Act 1960 and about National Pharmaceutical Pr Authority.
			B.Pharmacy VI semester (III Year) (PCI Regulation)
		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the importance of drug design and different techniques of drug design.
			Understand the chemistry of drugs with respect to their biological activity of Antibiotics, Antitubercular drugs, Urinary tract anti-infective ag
Medicinal Chemistry III - (Theory)	BP601T	2	Antiviral agents, Antifungal agents, Anti-protozoal Agents, Sulphonamides and Sulfones
		3	Know the metabolism, adverse effects and therapeutic value of drugs
		4	Know the importance of SAR of drugs.
		5	Understand combinatorial chemistry
			Upon Completion of this course student will able to
		1	Synthesize the following drugs and intermediatesSulphanilamide
			7-Hydroxy, 4-methyl coumarin
			Chlorobutanol
			Triphenyl imidazole
			Tolbutamide
			Hexamine
		2	Isonicotinic acid hydrazide
Medicinal Chemistry III (Practical)	BP607P	2	Chloroquine
Medicinal Chemistry III (Flactical)	Dr 00/1		
			Metronidazole
			Dapsone
			Chlorpheniramine maleate
			Prepare medicinally important compounds or intermediates by Microwave irradiation technique
		3	
		4	Draw structures and reactions using chem draw®
		_	Determine physicochemical properties such as logP, clogP, MR, Molecular weight, Hydrogen bond donors and acceptors for class of drugs course
		5	content using drug design software Drug likeliness screening (Lipinskies RO5)
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
.		1	Know drugs used in respiratory disorders and GIT disorders
Pharmacology III – Theory	BP602T	2	learn in detail about various infectious agents, mechanisms, sensitivity, and resistance of different antiinfectives.
(Theory)	21 3021	3	Gain knowledge about different antiviral drugs pharmacology.antitubercular, antileprotics, use of MDT, and drug resistance
		4	Study in detail about cancer pathophysiology and pharmacology of different anticancer drugs, Immunosupressants
		5	Explain about toxicological studies and chronopharmacology.
		1	Upon completion of the course student will be able to
			Do dose calculation in pharmacological experiments

1 1		2	Perform antiallergic activity by mast cell stabilization assay
		3	Study of anti-ulcer activity of a drug using pylorus ligand (SHAY) rat model and NSAIDS induced ulcer model.
		4	Study of and-ucer activity of a drug using pytotis rigand (STAT) far model and (SADS induced ucer model.
		5	Perform effect of agonist and antagonists on guinea pig ileum
Pharmacology III – Practical	BP608P	6	Estimate serum biochemical parameters by using semi- autoanalyser
Filamacology III – Flactical	Drouer	7	
		-	Study of effect of saline purgative on frog intestine
		8	Perform Insulin hypoglycemic effect in rabbit
		9	Perform test for pyrogens (rabbit method)
		10	Determine acute oral toxicity (LD50) of a drug from a given data
		11	Determine acute skin irritation / corrosion of a test substance
		12	Determine acute eye irritation / corrosion
Course	Course Code	Course Outcome	Course Outcome
		Number	
			Upon completion of the course student will be able to
		1	Learn about identification, authentication, processing of herbal raw material
		2	Know Indian systems of medicine, Ayurvedic formulation preparation
		3	Know good agricultural practices
Herbal Drug Technology (Theory)	BP603T	4	Study Neutraceutical market
		5	Know herbal drug interactions
		6	Know herbal cosmetic formulation preparation, excipients used
		7	Prepare herbal formulations like syrups, mixtures, tablets
		8	Know WHO&ICH guide lines for the evaluation of herbal drugs
		9	Know patenting and regulatory requirements for herbal drugs
			Upon completion of the course student will be able to
	BP609P	1	Perform preliminary phytochemical screening of crude drugs
		2	Learn and exercise techniques of Determination of alcohol content of asava and arista
		3	Learn and exercise techniques of Evaluation of excipients of natural origin
		4	Learn and exercise Cosmetic formulation (Preparation of dosage forms creams, lotions, shampoos) using standardized plant extract and evaluation as per pharmacopeial requirement
		5	Learn and exercise Therapeutic formulation (preparation of dosage forms syrups, mixtures, tablets) using standardized plant extract and evaluation as
Herbal Drug Technology (Practical)		5	per pharmacopeial requirement Learn and exercise Monographanalysis of herbal drugs from recent Pharmacopeiasto standardize the herbal extract for
(riactical)		6	the evaluation of identity and purity
		7	Learn and exercise Determination of total aldehyde content in herbal drugs or crude drugs to standardize the herbal
		/	extract for the evaluation of identity and purity
		8	Learn and exercise Determination of total phenol content in herbal drugs or crudedrugs to standardize the herbal
		0	extract for the evaluation of identity and purity
		9	Learn and exercise Determination of total alkaloid content in herbal drugs or crude drugs to standardize the herbal
		7	extract for the evaluation of identity and purity
Course	Course Code	Course Outcome	Course Outcome
Course	Course Coue	Number	
			Upon completion of the course student will be able to
			Understand the concept of Biopharmaceutics, Pharmacokinetics and their applications-absorption mechanisms, factors, their application with
Biopharmaceutics and		1	examples and also acquire knowledge on the concept of drug distribution, protein binding – factors.
Pharmacokinetics –	BP604T		Acquire knowledge on the concept of elimination. Understand the concepts of bioavailability, bioequivalence, concepts, assessments, design,
Theory		2	regulation, in vitro dissolution methods and in vitro-in vivo correlations.
		3	Describe the different pharmacokinetic models. Evaluate and estimate drug changes in the body by using pharmacokinetic models.
		4	Describe various multi compartment models and its significance.
		5	Understand the concept of Linear and Non-Linear kinetics, mechanisms and method of assessments.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon Completion of This Course Student will able to
ı – – – – – – – – – – – – – – – – – – –		L	

1 1			Understand regarding the enzyme immobilization and their different methods, applications in pharma field and study of some important enzymes like
		1	penicillinase, hyaluronidase, amylase, protease, streptodornase
		-	Describe the different types of pharmaceutical important products are prepared by r DNA technology like Human insulin, Intron, hepatitis vaccine and
		2	Port.
Pharmaceutical Biotechnology	BP605T		Explain the Immunity like cell mediated and humoral immunity and different bacterial, viral vaccine products. Trained regarding methods of
(Theory)		3	collection of blood products, plasma substitutes
			Learn in detail about the Immuno blotting techniques such as western blotting, southern blotting, ELISA, microbial transformation and steroida
		4	transformation and their application in pharmaceutical field.
			Acquire the knowledge in detail about the design of bioreactor, various methods of fermentation and production of penicillin vitamin B ₁₂ citric acic
		5	glutamic acid and griseofulvin
~		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon Completion of This Course Student will able to
		1	Learn about the Quality management systems, ICH guidelines, TQM, ISO, NABL
Quality Assurance (Theory)	BP606T	2	Understand the organisation personnel, premises, equipment, raw materials
Quality Assurance (Theory)	BP0001	3	Understand the process of Quality control of rubber, container closures, secondary packing materials
		4	Know very well about study of complaints and documentation of pharmaceutical industry
		5	Know about the evaluation and calibration of equipments, good warehousing practices
			B.Pharmacy IV Year I Semester (PCI Regulation)
	<i>a a a</i>	Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon Completion of This Course Student will able to
		1	Understand how to select a suitable analytical method for qualitative and quantitative analysis of a chemical constituents
Instrumental Methods of Analysis		2	Understand the interaction of matter with electromagnetic radiations and its applications in drug analysis
(Theory)	BP701T.	3	Understand the chromatographic separation and analysis of drugs
		4	Discuss quantitative & qualitative analysis of drugs by using various analytical instruments
		5	Outline principles, instrumentations and applications of Electrophoresis
		5	Upon completion of the course student will be able to
		1	Learn and exercise the determination of absorption maxima and effect of solvents on absorption maxima of organic compounds
		2	Learn and exercise the determination of dextrose by colorimetry and sulfanilamide by colorimetry
		3	Simultaneous estimation of ibuprofen and paracetamol by UV spectroscopy
		4	Assay of paracetamol by UV- Spectrophotometry
		5	Estimation of quinine sulfate by fluorimetry
umental Methods of Analysis (Pract	BP705P.	6	Study of quenching of fluorescence
	DI 70511	7	Learn and exercise the determination of sodium by flame photometry
		8	Determination of potassium by flame photometry
		9	Determination of chlorides and sulphates by nephelo turbidometry
		10	Separation of amino acids by paper chromatography and sugars by thin layer chromatography
		10	Departation of animo acids by paper enronatography and sugars by thin layer enronatography
		11	Understand the concepts of experiments done using HPLC
Correct		Course Outcome	
Course	Course Code	Number	Course Outcome
			Upon completion of the course student will be able to
		1	Outline the process of pilot plant and scale up of pharmaceutical dosage forms
Industrial Pharmacy	BP 702T	2	Understand the process of technology transfer from lab scale to commercial batch
II(Theory)	DI 7021	3	Summarize different laws and acts that regulate pharmaceutical industry
		4	Summarize the Concepts of Quality management
		5	Explain the approval process and regulatory requirements for drug products
			Upon completion of the course student will be able to
		1	Explain Organization of Hospital, Pharmacy therapeutic Committee and Pros and cons of drug distribution system
		2	Understand the Contents of Hospital pharmacy and functions of hospital pharmacist

		4	Estimate various pharmacokinetic parameters from the urinary excretion data
		5	Illustrate the role of Pharmacist in interdepartmental communication and community health education, Interpretation of Clinical laboratory results
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand various approaches for development of Novel drug delivery system
Novel Drug Delivery Systems	BP 704T	2	Outline the criteria for selection of drugs and polymers for development of Microencapsulation, Mucosal, Implantable drug delivery systems
100 tel Diag Dentery Dystems	51 /011	3	Summarize Basic components used, methods and types of formulation in transdermal, Gastroretentive and Nasopulmonary
		4	Summarize Basic components used, methods and types of formulation in Targeted drug delivery systems
		5	Explain the concepts of Intrauterine systems with its applications, intraocular barriers and formulations
			Upon completion of the course student will be able to
		1	To impart learning through experience.
			Enables students to have a smoother transition from academics to
		2	professional world.
Practice School	BP706PS	3	Enhances interpersonal skills, communication skills, leadership qualities
			Provides an opportunity to students to apply some of the ideas/skill sets
		4	in their careers, which also enhances their confidence levels
			Enables students to be aware of their personal strengths and limitations
		5	as professionals.
			B.Pharmacy IV Year II semester (PCI Regulation)
Course	Course Code	Course Outcome Number	Course Outcome
. Biostatistics and Research			Upon completion of the course student will be able to
Methodology (Theory)	BP801T	1	Determine the measures of central tendency and dispersion, correlation
		2	Determine regression, probability and hypothetical analysis
	Br 8011	3	Explain qualitative and quantitative design of research methodology
		4	Interpret the various statistical methods to solve statistical problems
		5	
			Upon completion of the course student will be able to
		1	Acquire high consciousness/realization of current issues related to health and pharmaceutical problems within the country and worldwide.
Social And Preventive Pharmacy	BP 802T	2	Create awareness on prevention and control of various diseases
(T)		3	Awareness about National Health care programs
		4	Have a critical way of thinking based on current healthcare development
		5	
Course	Course Code	Course Outcome	Course Outcome
		Number	
		1	Upon completion of the course student will be able to Acquire the concepts of Industry and competitive analysis; Analyzing consumer buying and industrial buying behavior.
Pharma Marketing Management		1 2	Acquire the concepts of industry and competitive analysis; Analyzing consumer buying and industrial buying benavior. Understand the concepts about Product management in pharmaceutical industry.
(T)	BP803ET.	3	An overview of personal selling and online promotional techniques for OTC Products.
		3	Summarize the concepts of Designing channel and Strategic importance, tasks in physical distribution management.
		4	
		5	An overview of DPCO(Drug Price Control Order), NPPA (National Pharmaceutical Pricing Authority) and Emerging concepts in marketing:
Course	Course Code	Course Outcome Number	Course Outcome

Pharmaceutical Regulatory Science			Upon completion of the course student will be able to
		1	Understand the process of drug discovery and development
	BP804 ET	2	Understand the concepts of Approval processes Exprain the regulatory approval process and their registration in indian and
(T)	DIGOTEI	3	international markets
		5	
		4	Describe the monitoring aspects of clinical trials, GCP and Pharmacovigilance
		5	Outline the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals
		Course Outcome	
Course	Course Code	Number	Course Outcome
		Number	
			Upon completion of the course student will be able to
		1	Understand the importance of quality in pharmaceutical products and are explored into importance of Good practices such as GMP, GLP etc.
Cosmetic Science (T)	BP809ET	2	An overview of Principles of formulation and building blocks of skin care products
Cosilieuc Science (1)	DF009E1	3	3. Understand the concepts and Classification of Sunscreens and SPF
		4	Summarize the Principles of Cosmetic Evaluation
		5	6. Understand Cosmetic problems associated with Hair, Skin and scalp
		-	o. Orderstand Cosmetic problems associated with Harr, Skin and scalp
Course	Course Code	Course Outcome Number	Course Outcome
		Number	Upon completion of the course student will be able to
		1	Generate the topic for the project and Collect the information from the relevant sources
Project Work	BP813PW	2	
Floject Work		2	Assemble the information into a more realistic draft ethically and conclude the contents.
		3	Prepare the presentation and explain outcome of their project along with further scope for research. This develops their oratory and leadership skills
		5

Course	Course Code		Upon completion of the course student will be able to
Course	Course Code	Number 1	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level.
Course Human Anatomyand Physiology-I		Number 1 2	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level.
	Course Code T1101	Number 1 2 3	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body.
Human Anatomyand Physiology-I		Number 1 2 3 4	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being.
Human Anatomyand Physiology-I		Number 1 2 3 4 5	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body.
Human Anatomyand Physiology-I		Number 1 2 3 4	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being.
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being. Upon completion of the course student will be able to
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6 1	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being. Upon completion of the course student will be able to Demonstrate skills for handling compound miscroscope and appliances used in hematological experiments
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6 1 2	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being. Upon completion of the course student will be able to Demonstrate skills for handling compound miscroscope and appliances used in hematological experiments Identify the various tissues and organs of different systems of human body.
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6 1 2 3	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being. Upon completion of the course student will be able to Demonstrate skills for handling compound miscroscope and appliances used in hematological experiments Identify the various tissues and organs of different systems of human body. Perform the various experiments related to special senses and nervous system.
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6 1 2 3 4	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Know about structure of all human organs macroscopic to microscopic level. Get knowledge about the normal functioning of all organs present in human body. Understand about normal functions of all systems present in human being. Understand about coordination between various systems present in human body. Brief knowledge about few common diseases that occur in human being. Upon completion of the course student will be able to Demonstrate skills for handling compound miscroscope and appliances used in hematological experiments Identify the various tissues and organs of different systems of human body. Perform the various experiments related to special senses and nervous system. Determine Blood pressure,Blood group and recording of temperature
Human Anatomyand Physiology-I		Number 1 2 3 4 5 6 1 2 3 4 5 6 1 2 3 4 5	Upon completion of the course student will be able to Understand about the structure of human body from fundamental level. Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know various types of dosage forms and Professional way of handling the prescription
		2	Know historical background and profession of pharmacy and career oppurtunities in pharmacy profession.
		3	Know various types of pharmacoepias, Development of Indian Pharmacopoeia and about the contents of monograph.
			Understand various Latin terms used in the prescription and how to measure weights in terms of imperial and metric systems and various
		4	pharmaceutical calculations.
			Understand about various types of powders and granules its stability over other dosage forms and about preparation of effervescent powders and
Pharmaceutics (Theory)	T1102	5	granules.
		6	Know different types of monophasic liquid dosage forms and its formulation aspects.
		7	Know biphasic liquid dosage forms, its formulation aspects and how to overcome stability problems.
		8	Gain information on preparation of semisolid dosage forms like suppositories
		9	Understand extraction and galenical products – Principles and procedures.
		10	Perform various pharmaceutical calculations
		11	Know various types of surgical dressings and information about suturing materials.
		12	Understand incompatibility and methods of overcoming incompatibility
			Upon completion of the course student will be able to
		1	Classify various conventional dosage forms in professional way and can able to handle the prescription and identify sources of errors in prescription.
		2	Gain skill in the operation of common pharmaceutical measuring, weighing and compounding devices. And can able to understand pharmaceutical
	T1109		terminology, abbreviations and symbols commonly used in the prescribing, dispensing, and charting of medications in the pharmacy.
Pharmaceutics (Practical)			Prepare various powders like Eutectic powder, Explosive powder, Dusting powder and Insufflations and can know about the advantage of solid
		3	dosage forms over other formulations.
		4	Formulate monophasic liquid dosage forms like syrups, elixers, linctuses, solutions.
		5	Formulate biphasic liquid dosage forms like emulsions and suspensions.
		6	Calculate displacement value and prepare suppositories
		7	Identify the type of incompatibility and preparing the formulation overcoming these incompatibilities.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Have cognizance of the cell structure, various transport mechanisms of cell membrane
		2	Know the structure and functions, mechanism of action, applications of enzymes in therapeutic and diagnostic purpose.
		2	Acknowledge the most important carbohydrate "glucose" this can be broken down via glycolysis and enters Krebs cycle and oxidative
		3	phosphorylation to generate ATP.
		4	Apprehend the oxidation of fatty acids and synthesis of cholesterol and various diseases associated with lipid storage
		5	Gather the knowledge of biological oxidation-reduction reactions
Medicinal Biochemistry (Theory)	T1103		
Wedicinal Biochemistry (Theory)	T1103	6	Familiar with catabolism of amino acids and various disorders of protein metabolism
	T1103	6	Familiar with catabolism of amino acids and various disorders of protein metabolism Gather the knowledge of protein synthesis and replication of nucleic acids
	T1103		Gather the knowledge of protein synthesis and replication of nucleic acids
	T1103	7	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory.
	T1103	7 8	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests.
, (,),	T1103	7 8 9	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality.
, (,),	T1103	7 8 9 10	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality. Have intuition on various lipo proteins and its importance.
, (,),	T1103	7 8 9 10 11	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality. Have intuition on various lipo proteins and its importance. Have an insight of immune chemical techniques.
	T1103	7 8 9 10 11 12	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality. Have intuition on various lipo proteins and its importance.
	T1103	7 8 9 10 11 12	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality. Have intuition on various lipo proteins and its importance. Have an insight of immune chemical techniques. Have familiarity with electrolyte composition in various body fluids and its importance
Medicinal Biochemistry (Practical)	T1103	7 8 9 10 11 12 13	Gather the knowledge of protein synthesis and replication of nucleic acids Get the idea of role of clinical chemistry laboratory. Acquire the knowledge on urine analysis and various kidney function tests. Familiar with of liver pigments and various tests to assess liver functionality. Have intuition on various lipo proteins and its importance. Have an insight of immune chemical techniques. Have familiarity with electrolyte composition in various body fluids and its importance Upon completion of the course student will be able to

		4	Identify the lipids present in the given sample
		5	Quantitatively estimate the various constituents in serum.
		6	Do qualitative analysis of carbohydrates and identification tests for proteins
		0	bo quantative analysis of carbonyutates and identification tests for proteins
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Familiar with physical properties and isomerism.
		2	Acknowledge brief idea on name, structures, nomenclature of various organic compounds.
		3	Have idea on free radicals, its mechanism and relative basicity.
		4	Understand the alicyclic compounds, its preparation methods & theories.
		5	Familiar with nucleophiles and its substitution reactions (SN1&SN2), kinetics and stereochemistry of the nucleophillic substitution reactions.
		6	Have knowledge on alkyl halides, elimination unimolecular & bimolecular reactions via formation of carbocation and its orientation.
		7	Have cognizance of electrophiles, free radical addition reactions, peroxide effect.
Diama di di manda di diama di di		8	Understand free radical substitution and addition reactions of alkene
Pharmaceutical organic chemistry	T1104		Familiar with resonance, hyperconjugation, nucleophillic substitution reactions, elimination reactions, formation of conjugated dienes, its orientation
(Theory)		9	and reactivity of addition to free radicals
		10	Understand Electrophillic substitution reations, ortho para directing groups, resonance stabilization of benzyl radical.
		11	Aware of carboxylic acids, its acidity, effect of substituents on its acidity, nucleophillic acyl substitution reactions.
		12	Have detailed emphasis on mechanisms for general naming reactions.
		13	Acknowledge mechanism of some named reactions.
		14	Know bimolecular displacement reactions, orientation and comparision with aromatic substitution.
		15	Have detailed idea to write oxidation & reduction reactions of some organic compounds.
		16	Predict synthesis, assay, uses of some pharmaceutically active organic compounds.
		10	Upon completion of the course student will be able to
Pharmaceutical organic chemistry	T110B	1	Synthesize various pharmaceutically active organic compounds
(Practical)		2	Identify and confirm various organic compounds
(Flactical)		3	Use stereo models
		5	
Course	Course Code	Course Outcome Number	Course Outcome
Course	Course Code		Course Outcome Upon completion of the course student will be able to
Course	Course Code		
Course	Course Code		Upon completion of the course student will be able to
Course	Course Code	Number 1	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals.
Course	Course Code	Number 1 2	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions.
Course	Course Code	Number 1 2 3	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity.
Course	Course Code	Number 1 2 3 4	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods.
Course	Course Code	Number 1 2 3 4 5	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations.
Course	Course Code	Number 1 2 3 4 5 6	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations. Develop an idea that standardization can be done for some compounds by precipitation titrations. Familiar with different classes of inorganic pharmaceuticals and their analysis by complexometry.
Course	Course Code	Number 1 2 3 4 5 6 7	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations. Develop an idea that standardization can be done for some compounds by precipitation titrations. Familiar with different classes of inorganic pharmaceuticals and their analysis by complexometry. Identification of different anions, cations and various indicators used for analysis of pharmaceuticals.
Course	Course Code	Number 1 2 3 4 5 6 7 8 9	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations. Develop an idea that standardization can be done for some compounds by precipitation titrations, Familiar with different classes of inorganic pharmaceuticals and their analysis by complexometry. Identification of different anions, cations and various indicators used for analysis of pharmaceuticals. Peculates the basic knowledge in the principles and concept of standardization by gravimetric methods.
	Course Code	Number 1 2 3 4 5 6 7 8 9 10	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations. Develop an idea that standardization can be done for some compounds by precipitation titrations. Familiar with different classes of inorganic pharmaceuticals and their analysis by complexometry. Identification of different anions, cations and various indicators used for analysis of pharmaceuticals. Peculates the basic knowledge in the principles and concept of standardization by gravimetric methods. Acquainted with the principles and procedures of limit tests.
Pharmaceutical Inorganic		Number 1 2 3 4 5 6 7 8 9	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. Develop the fundamentals of volumetric analytical skills. It constructs the fundamental methodology to prepare different strength of solutions. Acquires knowledge on acids, bases, buffers, methods of adjusting isotonicity. Associate the concept of standardization by oxidation – reduction methods. Gain knowledge on various non - aqueous solvents and different types of titrations. Develop an idea that standardization can be done for some compounds by precipitation titrations. Familiar with different classes of inorganic pharmaceuticals and their analysis by complexometry. Identification of different anions, cations and various indicators used for analysis of pharmaceuticals. Peculates the basic knowledge in the principles and concept of standardization by gravimetric methods. Acquainted with the principles and procedures of limit tests. Acquire the principles, procedures of analysis and applications of medicinal gases.
	Course Code T1105	Number 1 2 3 4 5 6 7 8 9 10 11	Upon completion of the course student will be able to Facilitates the fellow pupil to predict the sources of errors and methods to determine impurities in inorganic drugs and pharmaceuticals. 		19	Know about the preparation, assay, properties and medicinal uses of various electrolytes and dental products.
		20	Atriculate the principles and procedures of analysis of drugs and also regarding the application of inorganic pharmaceuticals.
		21	Enumerate the basics of radioactive compounds and pharmaceutical applications of radioactive substances.
			Upon completion of the course student will be able to
Dhamma a suti sal la sussi i		1	Gain the fundamentals of volumetric analytical skills analytical techniques in lab.
Pharmaceutical Inorganic	T110C	2	Determine various impurities in inorganic drugs and pharmaceuticals.
chemistry (Practical)		3	Identify and determine test for purity and preparation of some inorganic compounds.
		4	Ascertain the knowledge about assay of pharmaceutical substances.
		<i>a o i</i>	
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know Partial fraction, logarithm, matrices and determinant, analytical geometry, calculus, differential equation and Laplace transform
		2	Explain the different types of problems by applying theory of Partial fraction, Logarithms, Function, in Pharmacy Limits and continuity, Matrices and Determinant, Calculus
emedial Mathametics (Theory)	T1106	3	Describe the concept of matrix. Definite and indefinite integral and its application in pharmacy
emediai manametics (Theory)	11100	4	Explain the basic concept of graphical representation and diagrammatic representation of data
		5	Apply mathematical concepts and principles to perform computations for Pharmaceutical Sciences.
		6	Communicate mathematical knowledge and understanding to help in the field of Clinical Pharmacy
		7	Communicate mathematical knowledge and understanding to help in the field of Chinical Pharmacy Create, use and analyze mathematical representations and mathematical relationships.
		/	
Course	Course Code	Course Outcome	Course Outcome
course	course coue	Number	conse outome
			Upon completion of the course student will be able to
		1	Get knowledge on composition of plant cell and its importance.
		2	Get knowledge on different cellular composition and its functions of different parts of plant and their modifications.
		3	Know classification of plants based on its taxonomical characters.
Remedial Biology (Theory)	T1107	4	Get knowledge on taxonomical characters of specified families.
		5	Get knowledge about structural composition of microorganisms.
		6	Get knowledge door structural composition of animal cell and its importance.
		7	Know the external and internal characters of different types of vertebrates.
		8	Get knowledge about poisonous animals in the environment.
		0	Upon completion of the course student will be able to
		1	Get knowledge on instruments used in experimental biology and its operation.
		2	Know the principles and procedures involved in staining techniques for the preparation of slide.
		3	Grasp knowledge on different cellular composition and its importance in living organisms (plants&Animal).
		5	
Remedial Biology (Practical)	T110D	4	Get knowledge about morphological features and modified morphological features and its importance of different parts of plant.
		5	Know about anatomical features and physiological features with reference to human by simulatory model.
		6	Grasp knowledge on different cellular composition of different parts of plant.
		7	Know different types of animals for its identification.
		8	Know about few plant physiology techniques.
			Pharm D IIYear
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Describe abnormal physiologic processes associated with common disease processes
Pathophysiology (Theory)	T2101	1 2	Describe abnormal physiologic processes associated with common disease processes Explore the most common Etiologies and predisposing factors associated with human disease

		4	Understand how the various organ systems are interrelated, and use this understanding to promote a holistic approach towards the evaluation and
		5	treatment of patients. Explain age-related differences in physiologic and pathophysiologic processes and their clinical manifestations
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Acquire the knowledge in detail about the different characteristic of microorganisms such as bacteria, virus, rickettsiae, spirochetes and nutritional requirements of the microorganisms
		2	Determine the impact of pharmaceutical significance of microorganisms, cultivation and identification of bacteria and role of different scientist involved in the development of microbiology field
Pharmaceutical Microbiology	T2102	3	Gained the basis of bacterial growth curve, different growth pattern like batch culture, continuous culture, synchronous culture, chemostat and turbidostat methods.
(Theory)	T2102	4	Learned in detail about the immunity, different types of immunity, active, passive immunity, phagocytosis, structure of antigen, types of antibodies, exo and endo toxin and booster dose.
		5	Understand the different types of sterilization methods to kill the pathogenic microorganisms like moist heat sterilization, dry heat sterilization, radiation, filtration and chemical substances involved for the sterilization of microorganisms.
		6	Explain the different diagnostic methods such as widal test, southern blotting, western blotting methods, PCR test and QBC test
		7	Understand regarding the diseases and their causative microorganisms and symptoms and treatment methods
		8	Trained regarding methods and principles involved in the microbiological assay of antibiotics, vitamins and aminoacids
			Upon completion of the course student will be able to
		1	Understand different equipments and processing used in experimental microbiology
		2	Determine and report the Sterilization of glassware, preparation and sterilization of media, Sub culturing of bacteria and fungus. Nutrient stabs and
	T2107		slants preparations
		3	Determine the methods of Simple, Grams staining and acid fast staining
Pharmaceutical Microbiology (Practical)		4	Isolate pure culture of micro-organisms by multiple streak plate technique
		5	Determine the Microbiological assay of antibiotics by cup plate method, Motility determination by Hanging drop method
		6	Know Sterility testing of pharmaceuticals, Biochemical test.
		7	Understand enumeration of micro-organisms (Total and Viable)& Determination of minimum inhibitory concentration,
		8	Perform microbiological assay of antibiotics by cup plate method, Microbiological assay of vitamins by Turbidometric method
		9	Determine RWC, Diagnostic tests for some common diseases, Widal, malarial parasite.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
Pharmacognosy &		1	Know development of pharmacognosy from ancient to present
Phytopharmaceuticals (Theory)	T2103	2	Know the different classification methods of crude drugs
Thytopharmaceuteais (Theory)		3	Recognize crude drugs of pharmaceutical and medicinal importance and their microscopic study
		4	Understand the Cultivation methods of crude drugs
		5	Know the different methods of Adulteration and evaluation of Crude drugs
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand well about cellwall constituents and cell inclusions
Pharmacognosy &	T2108	2	Learn and experience techniques of macroscopical (colour, odour, taste, size, shape) and microscopical identification (T.S.) of crude drugs- alkaloids, glycosides, volatile oils, carbohydrates, resin crude drugs for the detection of identity and purity
Phytopharmaceuticals (practical)	12100	3	Learn and experience techniques of Quantitative chemical tests for lipid crude oils and drugs for the detection of identity and purity
		4	Learn and experience techniques of Chemical tests for carbohydrates, lipid crude drugs and oils, protein drug gelatin for the detection of identity and purity

Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course
		1	Students would have studied and learned about the importance of Pharmacokinetics i.e., Absorption, distribution, metabolism and excretion during
		1	selection of drugs and should have gained knowledge on Plasma drug concentration. Should have been thorough with the concepts of
		2	Students should have learned about ANS neurotransmitters, and pharmacology of drugs in ANS
		3	Students would have known about different cardiovascular disorders, detailed pharmacology of each class of drugs and multiple uses of same
			category of drugs like CCB's, Diuretics etc
Pharmacology-I (Theory)	T2104	4	Students would have gained knowledge on various CNS neurotransmitters, their agonists, antagonists and the concepts on Psychopharmacology drugs.
		5	Students would have studied indetail about respiratory disorders and the pharmacological of different categories of drugs.
		6	Students would know the basis of hormonal disorders. To understand synthesis, storage, release and the actions of different hormones in the body. To gain a sound knowledge over the use of drugs to correct either the hypo conditions or hyper conditions and their side effects. To provide a clear idea regarding different Insulin or other hormonal preparations available in the market along with their advantages and disadvantages.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	
		1	Demonstrate knowledge of the business and professional practice management skills in community pharmacies.
		2	Demonstrate the prescription, legality & identification of medication related problems like drug interactions.
Community pharmacy (Theory)	T2105	3	Identify symptoms of minor ailments and provide appropriate medication.
		4	Participate in prevention programs of communicable diseases and exhibit professional ethics by promoting safe and appropriate medication use throughout society.
		5	Demonstrate the role of pharmacist in improving the adherence.
		6	Explain age-related differences in physiologic and pathophysiologic processes and their clinical manifestations.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know the pathophysiology and management of cardiovascular, Respiratory and Endocrine diseases.
		2	Understand the therapeutic approach to the management of these diseases.
Pharmacotherapeutics-I (Theory)	T2106	3	Know the importance of preparation of individualized therapeutic plans based on diagnosis.
		4	Develop clinical skills in the therapeutic management of these conditions.
		5	Know the controversies in drug therapy.
		6	Provide patient – centered care to diverse patients using the evidence based medicine.
		1	Upon completion of the course student will be able to
Pharmacotherapeutics-I (Practical)	T2109	2	Identify drug interactions and rationalize the prescription Discuss the therapeutic approach to management of selected diseases
r manueoulerupeaues r (r rachear)	12107	3	Prepare individualized therapeutic plans based on diagnosis
		4	Perform patient counseling
		5	Conduct planned experiments and prepare laboratory report in a standard forma
			Pharma D III Year
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the pathophysiology of disease of Hematopoietic system and drugs acting on it.
		2	Cognizance underlying mechanism on renal system.

Pharmacology-II (Theory)	T3101	3	Acknowledge better understanding in pharmacology of chemotherapeutic agents.
	13101	4	Have basic knowledge of immunopharmacology.
		5	Describe principles of bioassay, various types of toxicity studies and their procedure.
		6	Appreciate the knowledge on learning in depth knowledge on cell, macromolecules, cell signaling, DNA replication, cell cycle, gene and its structure
			Upon completion of the course student will be able to
		1	Study of commonly used instruments in experimental pharmacology. Introduction to CPCSEA guidelines and OECD guidelines.
		2	Know Introduction to animal physiology with their biochemical reference values in various animal species.
		3	Study of various routes of drug administration, anesthetics agents used to anesthetize laboratory animals and techniques of Euthanasia
		4	Study of physiological salt solutions, drug solution and use in various animal experiments.
		5	Study of methods for collection of blood, body fluids and urine from experimental animals.
Dharmagelegy, II (Dreatical)	T3107	6	Determine the potency of a substance on isolated tissues.
Pharmacology-II (Practical)	15107	7	Explain the effect of drugs either alone or in combination on isolated frog's rectus abdominus muscle and frog's heart
		8	Know introduction to principles of bioassay, its types including advantages and disadvantages
		9	Explain and perform matching point, bracketing and interpolation bioassay to find unknown concentration of Acetylcholine.
		10	Demonstrate and discuss recording of effects of CNS acting drugs in rats/mice using Actophotometer and anti-epileptic activity using Convulsiometer with the help of software.
		11	Demonstrate recording of effects of skeletal muscle relaxant drugs in rats/mice using Rota-rod apparatus and Analgesic activity using Eddy's Hot Plate with the help of software.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the concepts of QC/QA, GLP, ICH Guidelines and their importance in pharmaceutical industry.
Pharmaceutical Analysis (Theory)	T3102	2	Develop the practical skills using instrumental techniques and gain knowledge on instrumental techniques for analysis of pharmaceuticals.
Thanhaceutear Anarysis (Theory)	13102	3	Acquire knowledge on basic principles of electrochemical analytical techniques.
		4	Gain knowledge on the basic principles of spectroscopy, develop the practical skills using instrumental techniques, understand the knowledge about assay of pharmaceutical substances.
			Upon completion of the course student will be able to
			Perform paper and thin layer chromatographic experiments and gain the knowledge on interpretation of data obtained after the experiment to
Pharmaceutical Analysis	T3108	1	conclude the results.
(Practical)		2	Handle different instruments like spectrophotometers, flame photometer, HPLC and GC to analyze the pharmaceutical compounds.
		3	Have ability to develop basic practical skills using instrumental techniques.
		4	Ascertain the knowledge about assay of pharmaceutical substances.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the pathophysiology and management of Cancer, Renal, Infectious and Skin diseases.
		2	Develop Patient case based Assessment Skills.
			Choose and justify appropriate drug and treatment duration to a given patient with regard to current recommendations and patient-related factors such
Pharmacotherapeutics II (Theory)	T3103	3	as other diseases, age, organ functions and other drug treatment.
		4	Calculate creatinine clearance using the Cockroft-Gaults equation and by results and patient factors evaluate renal function and the need for
		4	adjustment of drug therapy
		5	Apply Knowledge and clinical skills to care of patients
		6	Provide patient – centered care to diverse patients using the evidence based medicine.
			Upon completion of the course student will be able to
		1	Upon completion of the course student will be able to Identify drug interactions and rationalize the prescription
Pharmacotheraneutics-II (Practical)	T3109	1	Identify drug interactions and rationalize the prescription
Pharmacotherapeutics-II (Practical)	T3109	1 2 3	

		4	Perform patient counseling
		5	Conduct planned experiments and prepare laboratory report in a standard forma
		5	Conduct planned experiments and prepare laboratory report in a standard forma
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the various concepts of the pharmaceutical legislation in India.
		2	Gain knowledge on Principles and Significance of professional ethics and about moral principles to be followed in the society.
		3	Learn the various laws governing the manufacturing, sale, research & usage of drugs. Understand significance of Schedule M and Schedule Y related Manufacturing & clinical trials. understand the labeling requirements and packaging guidelines for drugs and cosmetics.
	T2104	4	Know Laws as prescribed by the Pharmacy Council of India and information regarding duties of drug inspector and pharmacy Act.
Pharmaceutical Jurisprudence	T3104		Gain knowledge on manufacture of Ayurvedic, Homeopathic preparations, construction of bonded and non- bonded laboratory and duties to be paid
		5	for manufacturing of alcoholic preparations and export of alcoholic preparations in bond and outside bond.
		6	Identify potential fraud and abuse legal issues of narcotic &psychotropic substances.
		7	Study the Sailent Features of Drugs and magic remedies Act and its rules and gain information on prohibited and exempted advertisements.
		8	Understand about the regulations pertaining to drug price control order and describe about the sale price of bulk drugs and retail price of formulations.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the concept of advanced techniques in the drug discovery, CADD, QSAR and cobinatorial chemistry.
		2	Gain knowledge in the medicinal chemistry of Anti-infective agents.
		3	Acquire knowledge about sulphonamides, classification, structures, SAR, therapeutic uses and synthesis.
		4	Acquire knowledge in the classification, structures, SAR, therapeutic uses and synthesis of anti-malarial, and antibacterials.
		5	Acquire knowledge in the classification, structures, SAR, therapeutic uses and synthesis of antibiotics.
		6	Gain knowledge in the medicinal chemistry of antineoplastic agents.
		7	Understand the etiology of various cardiac diseases and identify targets to treat them and gain knowledge on medicinal chemistry of drugs acting on
Medicinal Chemistry (Theory)	T3105		cardiovascular system
		8	Acquire knowledge about Hypoglycemic agents.
		9	Gain knowledge in the medicinal chemistry of ant thyroid drugs.
		10	Gain knowledge in the medicinal chemistry of antidiabetics.
		11	Understand the importance of various diagnostic aids.
		12	Gain knowledge in the medicinal chemistry of steroidal harmones, their analogues.
			Upon completion of the course student will be able to
Madiainal Chamiatan (Device)	T2110	1	Carry out the synthesis of various organic intermediates containing heterocyclic rings, drugs.
Medicinal Chemistry (Practical)	T3110	2	Analyze the purity of API and intermediates.
		3	Ascertain the knowledge on the methodology to perform QSAR
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Familiarize oneself with the types of various dosage forms.
		2	Grasp the formulation and quality control test and evaluation of uncoated as well as coated tablets.
Pharmaceutical Formulations	T3106	3	Become expert in production and filling of hard & soft gelatine capsules. Quality control test for Same
(Theory)	13100	4	Gain an understanding of the formulation and evaluation of semisolid preparation such as ointment, gel etc.
		5	Know inside out in the formulation concepts of pharmaceutical suspensions and emulsions and their stability problems.
		6	Acquire working knowledge and understanding the production facilities of Parenterals
		7	

Pharmaceutical Formulations (Practical)			Upon completion of the course student will be able to
	T3111	1	Prepare and evaluate various solid and liquid dosage forms and demonstration of tablet coating
	15111	2	Prepare parental formulations
		3	Formulate and evaluate semisolid dosage forms
		4	Prepare various cosmetic preparations
			Pharm D IV Year
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the pathophysiology and pharmacotherapy of several common disease states
		2	Know The Principles of Pharmacotherapy in Particular Patients Groups.
Pharmacotherapeutics-III (Theory)	T4101	3	Apply knowledge and clinical skills to problem solving in unfamiliar situations.
		4	Obtain and interpret information from literature and apply this information in a clinical situation
		5	Present information on the therapeutic use of drugs to fellow students and staff in a clear and professional manner.
		6	Undertake medication reviews
			Upon completion of the course student will be able to
			Identify drug interactions and rationalize the prescription
Pharmacotherapeutics-III	T4107	2	Discuss the therapeutic approach to management of selected diseases
(Practical)	11107	3	Prepare individualized therapeutic plans based on diagnosis
		4	Perform patient counseling
		5	Conduct planned experiments and prepare laboratory report in a standard forma
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know various drug distribution methods.
		2	Know the professional practice management skills in hospital pharmacies.
Hospital Pharmacy (Theory)	T4102	3	Provide unbiased drug information to the doctors.
		4	Know the manufacturing practices of various formulations in hospital set up.
		5	Appreciate the practice based research methods.
		6	Appreciate the Practice Based Research Methods, stores management and inventory control.
			Upon completion of the course student will be able to
		1	Analyse prescriptions for drug interaction
Hospital Pharmacy (Practical)	T4108	2	Formulate and prepare parenteral formulations and powders
Hospital I harmacy (I factical)	14100	3	Perform inventory analysis
		4	Answer drug information queries through literature search
		5	Conduct planned experiments and prepare laboratory report in a standard format
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Explain the roles and responsibilities of clinical pharmacist
		2	Analyse and interpret the laboratory test results for clinical diagnosis
		3	Conduct interview to elicit medication history and perform patient counseling
Clinical Pharmacy (Theory)	T4103	4	Identify, monitor, assess, manage, prevent, document and report suspected adverse drug reactions
		5	Provide drug and poison information through critical analysis
		5 6	Provide drug and poison information through critical analysis Recognise the potential sources of medication errors and act for its prevention
			Recognise the potential sources of medication errors and act for its prevention

	I	3	Analyse and interpret the data obtained through laboratory tests
		4	Conduct planned experiments and prepare laboratory report in a standard format
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know basic research methods which are used in clinical study design that relates to experimental and observational studies, collecting data, study and analyze. Observe Errors relating experimentation
Biostatistics & Research		2	Observe relation between components also measure and study linearly. We can observe one component influence with multiple factors.
Methodology (Theory)	T4104	3	Understand Testing the hypothesis, how far population parameter significant based on estimator with the help of parametric tests. Non parametric tests can also observed
		4	Understand analysis of variance helps in study total variation observational data
		5	Know application of analysis in field or lab experimental to design. Factorial experiments.
		6	Know research objects about reliability and validity experimental and clinical study.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Know basic concepts and factors influencing absorption, distribution and elimination of drugs.
		2	Understand various pharmacokinetic models used in calculating various pharmacokinetic parameters
		3	Study the pharmacokinetic parameters of drugs administered through intravenous bolus and infusion routes that follows one compartment open mode
Biopharmaceutics &Pharmacokinetics (Theory)	T4105	4	Determine the pharmacokinetic parameters of drugs administered through intravenous bolus and infusion routes that follows two compartment open model.
		5	Understand the concept of multiple dosage regimen and determine pharmacokinetic parameters of drugs administered through intravenous bolus, infusion and oral routes.
		6	Understand the non-linear pharmacokinetic model and its parameters of drugs.
		7	Determine pharmacokinetic parameters by using non-compartmental model
		8	Understand basic concepts, estimation and factors influencing bioavailability and bioequivalence of drugs.
			Upon completion of the course student will be able to
		1	Enhance dissolution characteristics of slightly soluble drugs by co-solvency, solid dispersion and use of surfactant
Biopharmaceutics &		2	Compare dissolution studies of two different marketed products of same drug.
Pharmacokinetics (Practical)	T4110	3	Perform Protein binding studies of a drug and Calculation of bioavailability
Tharmacokineties (Tractical)		4	Calculate the Pharmacokinetic parameters like Ka, Ke, t1/2, Cmax, AUC, AUMC, MRT etc. from blood profile data.
		5	Calculate bioavailability from urinary excretion data for two drugs.
		6	Determine metabolic pathways for different drugs based on elimination kinetics data
		7	Perform absorption studies in animal inverted intestine using various drugs.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Demonstrate an understanding of the roles of various health care personnel in the prevention and management of poisonings
		2	Demonstrate an understanding of the health and economic implications of toxic exposures
		3	Demonstrate and apply an understanding of general toxicology principles and clinical management practice
Clinical Toxicology (Theory)	T4106	4	Demonstrate and apply an understanding of the history, assessment, and therapy considerations associated with the management of a toxic exposure
		5	Demonstrate and apply an understanding of the characteristics of and treatment guidelines for specific toxic substances
		6	Propose several preventive approaches to reduce unintentional poisonings
		7	Enable the pharmacist to function as contributing health care team member when faced with a toxic exposure experience, including emergencies.
			Pharm D V Year

Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand new drug development process
		2	
			Understand clinical studies scenario in Indian and other countries
Clinical Research (Theory)	T5101	3	Understand the regulatory and ethical requirement in clinical trails
		4	Know the role and responsibilities of clinical trial personnel
		5	Know the designing of clinical trial documents
		<u>6</u> 7	Manage the clinical trial coordination process Know safety monitoring and reporting in clinical trails
		,	Know safety monitoring and reporting in chinical dans
Course	Course Code	Course Outcome	Course Outcome
		Number	
			Upon completion of the course student will be able to
		1	Compare and contrasts different study designs.
		2	Distinguish methods of data collection and recording.
		3	Understand issues involved in selecting sample and recruiting participants.
Pharmacoepidemiology and	T5102	4	Discuss threats to validity and issues of interpretations
Pharmacoeconomics (Theory)	15102	5	Discuss applications of pharmacoepidemiological concepts and methods to pharmacy practice.
		6	Explain measures of disease occurrence and association.
		7	A monostrate knowledge and understanding of statistical theory.
		8	Select and apply appropriate statistical techniques for managing common types of medical data.
		9	Interpret correctly the results of statistical analyses
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Apply PK-PD principles in cases using patient data to optimize pharmacotherapy and drug dosing for maximal efficacy and minimal toxicity.
Clinical Pharmacokinetics & Pharmacotherapeutic Drug	T5103	2	Recognise, document and manage drug dosing in cases involving significant patient pharmacokinetic variability due to physiology or disease (eg age, obesity, pregnancy, malabsorption, organ dysfunction, critical illness, therapeutic target site).
Monitoring		3	Recognize, characterize and manage cases with clinically significant PK-PD drug interactions.
		3	Demonstrate appropriate therapeutic drug management (TDM) in cases with medications for which concentrations can be measured or
		4	predicted from available PK research data
Course	Course Code	Course Outcome Number	Course Outcome
		Nulliber	
		Number	Upon completion of the course student will be able to
		1	Upon completion of the course student will be able to Discuss the role of Pharmacist in clinical pharmacy services
Clerkship	T5104	1 2	Upon completion of the course student will be able to Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist
	T5104	1	Discuss the role of Pharmacist in clinical pharmacy services
	T5104	1 2	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist
	T5104	1 2 3	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist Discuss the available therapeutic options in the management of diseases
	T5104 Course Code	1 2 3 4	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist Discuss the available therapeutic options in the management of diseases Prepare a pharmaceutical care plan for a given case
Clerkship		1 2 3 4 5 Course Outcome	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist Discuss the available therapeutic options in the management of diseases Prepare a pharmaceutical care plan for a given case Detect ,Interpret and report medication errors and drug interactions
Clerkship		1 2 3 4 5 Course Outcome Number	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist Discuss the available therapeutic options in the management of diseases Prepare a pharmaceutical care plan for a given case Detect ,Interpret and report medication errors and drug interactions Course Outcome
Clerkship		1 2 3 4 5 Course Outcome	Discuss the role of Pharmacist in clinical pharmacy services Demonstrate the skills of a clinical Pharmacist Discuss the available therapeutic options in the management of diseases Prepare a pharmaceutical care plan for a given case Detect ,Interpret and report medication errors and drug interactions Course Outcome Upon completion of the course student will be able to

		4	Carry out and report an information survey and take account of findings in executing project
Project Work	T5105	5	Evaluate, select and apply relevant theories and techniques from the full range of courses studied using conceptual models and frameworks to enhance depth of understanding
		6	Select appropriate methodology for investigative work, taking into account the pros and cons of the alternatives available and develop solution proposals based on reasoned judgement
		7	Present a coherent, logically argued, fully referenced report and engage in a professional manner in a viva-voce discussion about the project drug
		I	M.Pharmacy
			Pharmaceutics I Semester (PCI Regulation)
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Understand the UV-Visible spectroscopy, IR, flame and atomic absorption spectroscopy.
Modern Pharmaceutical	MPH101T	2	Know principles of NMR spectroscopy, instrumentation and applications.
Analytical Techniques (Theory)		3	Understand the principles of mass spectroscopy, different ionization techniques and applications of mass spectroscopy.
		4	Understand the different chromatographic techniques like paper, ion exchange, gas, HPLC, etc
		6	Know the principles and procedures of paper and capillary electrophoresis; XRD and its applications. Understand the principles and procedures of immunoassays like radioimmunoassay, ELISA and bioluminescent assays.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
	MPH102T	1	Understand drug delivery system give a detailed information transporting a pharmaceutical compound in the body as needed to safely achieve its desired therapeutic effect.
		2	Understand approaches, formulations, technologies, and systems for transporting a pharmaceutical compound in the body as needed to safely achieve its desired therapeutic effect with suitable drug delivery.
Drug Delivery System (Theory)		3	Know methods of manufacture and evaluation of various Sustained Release (SR) and Controlled Release (CR) formulations like Gastroretentive, Baccal, Transdermal and Occular drug delivery systems.
		4	Understand recent developments in protein and peptide for parenteral delivery approaches will give new dimension of drug deliver for antibiotics, insulin, etc.
		5	Understand vaccine delivery and different mode of application approach for clinical use. They know the different types of Drug carrier used in the process of drug delivery which serves to improve the selectivity, effectiveness, and/or safety of drug administration.
		6	Know the latest drug delivery knowledge and think to develop new formulation based on the individual requirement.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Learn about the science behind performing a Preformulation study before formulating a novel drug delivery system.
		2	Understand the current good manufacturing practices that are implemented in various pharmaceutical industries.
Modern Pharmaceutics (Theory)	MPH103T	3	Understand various validation protocols that are been followed in the pharmaceutical industries as per various regulatory guidelines.
		4	Understand various optimization techniques that are used in prior to formulate any new dosage form.
		5	Understand how to run the optimization softwares (For ex: Design expert and Minitab). Understand about the science between compaction and compression of a tablet.
		7	Understand about the science between compaction and compression of a tablet. Understand about various dissolution parameters that have to be incorporated while performing dissolution studies.
Course	Course Code	Course Outcome Number	Course Outcome

			Upon completion of the course student will be able to
Regulatory Affairs (Theory)		1	Identify the concepts of innovator and generic drugs and drug development process.
			Describe the regulatory guidances and guidelines for filing and approval process.
	MDUI04T	2	
	MPH104T	3	Detail the preparation of dossiers and their submission to regulatory agencies in different countries.
		4	Identify the post approval regulatory requirements for actives and drug products.
		5	Express the submission of global documents in CTD/eCTD formats.
		6	Define the clinical trials for approvals for conducting clinical trials.
		7	Describe the pharmacovigilence and process of monitoring in clinical trials.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
			Know Variability and Operation of commonly used analytical instruments like UV Vis spectrophotometer, HPLC, Gas Chromatography, Fluorimetry
		1	and Flame photometry.
Pharmaceutics Practical I	MPH105PA	2	Perform Analysis of various drugs and their formulation in single and combination dosage forms.
(Practical)		3	Have knowledge as well as hands on training with respect to the principles of formulation science such as Preformulation studies and Micromeritics.
		4	Possess the knowledge about effect of compressional force on tablets Properties.
		4	Upon completion of the course student will be able to
Pharmaceutics Practical II		1	Get knowledge with respect to composition of dosage forms, selection of drugs and polymers for the development of delivering system
(Practical)	MPH105PB	2	
(Flactical)		3	Formulate and evaluation of various customized, Sustained Release (SR) and Controlled Release (CR) formulations.
		5	Formulate and evaluate various novel drug delivery systems: Floating DDS, Muco adhesive tablets and Trans dermal patches
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Improve Oral and written communication skills.
		2	
		2	Explore an appreciation of theself in relation to its larger diverse social and academic contexts.
		3	
Seminar/Assignment		3	Understand and discuss current, real-world issues
Seminar/Assignment		3	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them
Seminar/Assignment		3 4 5	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations
Seminar/Assignment		3 4 5 6	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them
Seminar/Assignment		3 4 5	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments
Seminar/Assignment		3 4 5 6	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.
Seminar/Assignment		3 4 5 6	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments
Seminar/Assignment Course	Course Code	3 4 5 6	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.
	Course Code	3 4 5 6 7 Course Outcome	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester
	Course Code	3 4 5 6 7 Course Outcome	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to
Course	Course Code	3 4 5 6 7 Course Outcome Number 1	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery.
Course Molecular Pharmaceutics		3 4 5 6 7 Course Outcome	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to
Course Molecular Pharmaceutics (Nano Tech and Targeted DDS)	Course Code MPH201T	3 4 5 6 7 Course Outcome Number	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery.
Course Molecular Pharmaceutics		3 4 5 6 7 Course Outcome Number 1	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery. Understand the criteria for selection of drugs and polymers for the development of NTDS Know the need, concept, design and evaluation of various targeted drug delivery systems like Nano Particles, Liposomes, Niosomes, Aquasomes, Phytosomes, Electrosomes and Monoclonal Antibodies.
Course Molecular Pharmaceutics (Nano Tech and Targeted DDS)		3 4 5 6 7 Course Outcome Number	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery. Understand the criteria for selection of drugs and polymers for the development of NTDS Know the need, concept, design and evaluation of various targeted drug delivery systems like Nano Particles, Liposomes, Niosomes, Aquasomes,
Course Molecular Pharmaceutics (Nano Tech and Targeted DDS)		3 4 5 6 7 Course Outcome Number 1 2 3	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery. Understand the criteria for selection of drugs and polymers for the development of NTDS Know the need, concept, design and evaluation of various targeted drug delivery systems like Nano Particles, Liposomes, Niosomes, Aquasomes, Phytosomes, Electrosomes and Monoclonal Antibodies.
Course Molecular Pharmaceutics (Nano Tech and Targeted DDS)		3 4 5 6 7 Course Outcome Number 1 2 3 4	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery. Understand the criteria for selection of drugs and polymers for the development of NTDS Know the need, concept, design and evaluation of various targeted drug delivery systems like Nano Particles, Liposomes, Niosomes, Aquasomes, Phytosomes, Electrosomes and Monoclonal Antibodies. Understand gene therapy and different mode of application approach for clinical use.
Course Molecular Pharmaceutics (Nano Tech and Targeted DDS) (Theory)	MPH201T	3 4 5 6 7 Course Outcome Number 1 2 3 4 5 Course Outcome Number	Understand and discuss current, real-world issues Introduce to different types of scholarly sources and how to access them Provide with preliminary skills to do further research in the field of international relations Know how to break down a piece of writing into its component parts and analyze the arguments Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another. Pharmaceutics II Semester Course Outcome Upon completion of the course student will be able to Understand the various approaches for development of novel drug delivery systems like Tumor targeting and Brain specific delivery. Understand the various approaches for development of novel drug delivery systems like Nano Particles, Liposomes, Niosomes, Aquasomes, Phytosomes, Electrosomes and Monoclonal Antibodies. Understand gene therapy and different mode of application approach for clinical use. Understand the formulation and evaluation of Aerosols and Intra Nasal Route Delivery systems.

			Understand the basic concepts in biopharmaceutics and pharmacokinetics
Advanced Biopharmaceutics & Pharmacokinetics (Theory)	MPH202T	2	Understand the use of raw data and derive the pharmacokinetic models and parameters that best describe the process of drug absorption, distribution,
		2	metabolism and elimination. Describe various pharmacokinetic parameters by using various mathematical models.
		3	Know the critical evaluation of biopharmaceutic studies involving drug product equivalency
		4	Understand the design and evaluation of dosage regimens of the drugs using pharmacokinetic and biopharmaceutic parameters
		5	The potential clinical pharmacokinetic problems and application of basics of pharmacokinetic
		6	Understand the basic concepts of BA/BE studies and in-vitro -in-vivo correlations (IVIVC)
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Explain about the role of computers in pharmaceutical research, various modelling approaches and parameters used in modelling.
		2	Understand about basics and guidelines of Quality by Design (QbD)
		3	Understand about computation modelling techniques of ADME process for a drug
Computer Aided Drug Delivery System (Theory)	MPH203T	4	Understand about the concept of optimization and they can design a formulation of emulsion and microemulsion using softwares like design expert.
Derivery System (Theory)		5	Understand about legal aspects involved in using computers in pharmaceutical research
		6	Understand about using of computer aided designs in in-vitro dissolution studies.
		7	Understand about usage of computers in stimulating whole organisms and tissues.
		8	Understand the regulations involved in clinical data collection and management.
		9	Understand about current status of pharmaceutical automation and its future trends
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
	MPH204T	1	Learn about the science behind performing a Preformulation study before formulating a novel drug delivery system.
Formulation Development of		2	Learn about various pre-formulation parameters that have to be studied before formulating a novel drug delivery system.
Pharmaceutical and Cosmetic		3	Learn about basics and recent developments in excipient science.
Products (Theory)	WII 112041	4	Learn about the importance of solubility for a drug and methods to enhance the solubility.
Fibducts (Theory)		5	Learn about basics of drug dissolution and various parameters involved in in vitro drug dissolution studies.
		6	Know about the standard stability testing procedures for formulated dosage forms using ICH guidelines.
		7	Understand about basics and legal aspects of cosmeticology and various formulations like dentifrices, lipsticks, nail polish and baby products etc.
Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
	MPH205PA	1	Know the effect of temperature, non solvent, incompatible polymer addition on preparation of microcapsules.
Pharmaceutics Practical III		2	Design and perform in-vitro evaluation studies for various novel drug delivery systems: Alginate beads, gelatin /albumin microspheres, liposomes /
(Practical)		2	niosomes and spherules.
(Flactical)		3	Perform in-vitro dissolution of marketed products and interpretation of dissolution data.
		4	Calculate the various pharmacokinetic parameters of drugs and pharmaceutical products in animal models / Software.
			Upon completion of the course student will be able to
Pharmaceutics Practical IV		1	Learn how to use the Design Expert Software in the formulation design and data analysis.
(Practical)	MPH205PB	2	Calculate the various pharmacokinetic and pharmacodynamics parameters using Computer Simulations / Computational Modeling.
(Flactical)		3	Formulate and evaluate various cosmetic products and Multi Vitamin Syrup.
		4	Know the optimization techniques in Formulation Development of Tablets.
Course	Course Code	Course Outcome Number	Course Outcome

			Upon completion of the course student will be able to
Seminar/Assignment		1	Improve Oral and written communication skills.
		2	Explore an appreciation of theself in relation to its larger diverse social and academic contexts.
			· · · · · · · · · · · · · · · · · · ·
		3	Understand and discuss current, real-world issues
		4	Introduce to different types of scholarly sources and how to access them
		5	Provide with preliminary skills to do further research in the field of international relations
		6	Know how to break down a piece of writing into its component parts and analyze the arguments
		0	Know now to break down a prece of writing into its component parts and analyze the arguments
		7	Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.
			PHARMACEUTICAL ANALYSIS SEMESTER I
Course	Course Code	Course Outcome	Course Outcome
		Number	
			Upon completion of the course student will be able to
		1	Understand the UV-Visible spectroscopy, IR, flame and atomic absorption spectroscopy.
Modern Pharmaceutical		2	Know principles of NMR spectroscopy, instrumentation and applications.
Analytical Techniques (Theory)	MPA101T	3	Understand the principles of mass spectroscopy, different ionization techniques and applications of mass spectroscopy.
Analytical Techniques (Theory)		4	Understand the different chromatographic techniques like paper, ion exchange, gas, HPLC, etc
		5	Know the principles and procedures of paper and capillary electrophoresis; XRD and its applications.
		6	Understand the principles and procedures of paper and capitally every process, they and is approximately and TGA.

Course	Course Code	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
	MPA102T	1	Know about impurities classification, residual solvents classification and limits.
		2	Understand the classification of elemental impurities, factors affecting stability and stability commitment
Advanced Pharmaceutical Analysis		3	Understand accelerated stability studies, stability zones, photostability testing and stability of biological products.
(Theory)		5	Understand accelerated stability studies, stability zones, photostability testing and stability of biological products.
(Ineory)		4	Understand the regulatory requirements and HPTI C fingerprinting
(Ineory)		4	Understand the regulatory requirements and HPTLC fingerprinting.
(Ineory)		5	Know bioassays of vaccines and PCR instrumentation
		5 6	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays.
(Theory) Course	Course Code	5	Know bioassays of vaccines and PCR instrumentation
	Course Code	5 6 Course Outcome	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays.
Course	Course Code	5 6 Course Outcome	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to
Course Pharmaceutical Validation		5 6 Course Outcome Number 1	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT.
Course	Course Code MPA103T	5 6 Course Outcome Number 1 2	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware
Course Pharmaceutical Validation		5 6 Course Outcome Number 1 2 3	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation.
Course Pharmaceutical Validation		5 6 Course Outcome Number 1 2 3 4	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines.
Course Pharmaceutical Validation		5 6 Course Outcome Number 1 2 3 4 5	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation.
Course Pharmaceutical Validation		5 6 Course Outcome Number 1 2 3 4	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines.
Course Pharmaceutical Validation (Theory)	MPA103T	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property.
Course Pharmaceutical Validation (Theory)	MPA103T	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome
Course Pharmaceutical Validation (Theory)	MPA103T	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome Number	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome Upon completion of the course student will be able to
Course Pharmaceutical Validation (Theory) Course	MPA103T CourseCode	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome Number 1	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome Upon completion of the course student will be able to Learn about the flavor studies and to detect spoilage of food.
Course Pharmaceutical Validation (Theory)	MPA103T	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome Number 1 2 3 3	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome Upon completion of the course student will be able to Learn about the flavor studies and to detect spoilage of food. Understand the advanced analytical methods for estimation of concentration of carbohydrates, vitamins, fats, amino acids, proteins in food.
Course Pharmaceutical Validation (Theory) Course	MPA103T CourseCode	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome Number 1 1 2	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome Upon completion of the course student will be able to Learn about the flavor studies and to detect spoilage of food. Understand the advanced analytical methods for estimation of concentration of carbohydrates, vitamins, fats, amino acids, proteins in food. Understand the process of determining nutritional quality
Course Pharmaceutical Validation (Theory) Course	MPA103T CourseCode	5 6 Course Outcome Number 1 2 3 4 5 Course Outcome Number 1 2 3 3	Know bioassays of vaccines and PCR instrumentation Understand the principles and procedures of different immunoassays. Course Outcome Upon completion of the course student will be able to Understand introduction of Qualification and Validation involving Validation Master Plan, DQ, IQ, OQ, PQ, RQ, FAT, SAT. Know qualification of analytical instruments and glassware Know Advanced Validation of Utility Systems (Water, HVAC, Compressed air and Nitrogen) and Cleaning Validation. Know Analytical Method Validation according to USP and ICH guidelines. Understand Rigorous detailing of General principles of Intellectual Property. Course Outcome Upon completion of the course student will be able to Learn about the flavor studies and to detect spoilage of food. Understand the advanced analytical methods for estimation of concentration of carbohydrates, vitamins, fats, amino acids, proteins in food. Understand the process of determining nutritional quality Know very well about Chromatography techniques like GC-MS,LC- MS,Electrophoresis,HPLC,HPTLC,SFC, HPCPC, RIA,ELISA in analysis of

Course	CourseCode	Course Outcome	Course Outcome
		Number	Upon the completion of the course student will be able to perform
Pharmaceutical Analysis Practical I (Practical)	MPA105PA	1	Calibration of glasswares and pH meter
		2	Calibration of UV-Visible spectrophotometer and FTIR spectrophotometer
		3	Calibration of GC and HPLC
		4	Cleaning validation of any one equipment and Imupurity profiling of drugs
		5	Assay of official compounds by different titrations and instrumental techniques
		6	Estimation of riboflavin/quinine sulphate by fluorimetry; Estimation of sodium/potassium by flame photometry
		7	Quantitative determination of hydroxyl group and amino group, and Colorimetric determination of drugs by using different reagents
		1	Upon completion of the course student will be able to
Pharmaceutical Analysis		1	Learn about the determination of total reducing sugar, proteins, vitamins content in foods
		2	Determine the saponification value, Iodine value, Peroxide value, Acid value of food products.
	MPA105PB	3	Understand the selection of analytical methods for analysis of synthetic colors in food products
Practical II (Practical)	MITTION D	4	Know very well about determination of concentration of preservatives and pesticides residue in food products
		5	Understand the selection of various analytical methods for determining food additives
		6	Determine density and specific gravity of food substances.
		0	Detrimine density and spectre gravity of food substances.
Course	CourseCode	Course Outcome Number	Course Outcome
			Upon completion of the course student will be able to
		1	Improve Oral and written communication skills.
		2	Explore an appreciation of theself in relation to its larger diverse social and academic contexts.
		3	Understand and discuss current, real-world issues
Seminar/Assignment		4	Introduce to different types of scholarly sources and how to access them
		5	Provide with preliminary skills to do further research in the field of international relations
		6	Know how to break down a piece of writing into its component parts and analyze the arguments
		7	Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.
		<u>.</u>	PHARMACEUTICAL ANALYSIS SEMESTER II
Course	CourseCode	Course Outcome Number	Course Outcome
	•	Number	
		Number	Upon completion of the course student will be able to
		1	Upon completion of the course student will be able to Understand the basic principles of HPLC and applications of HPLC
Advanced Instrumental	MPA201T	1	Understand the basic principles of HPLC and applications of HPLC.
Advanced Instrumental Analysis (Theory)	MPA201T	1 2	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC.
	MPA201T	1 2 3	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation.
	MPA201T	1 2 3 4	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems.
Analysis (Theory)	MPA201T	1 2 3 4 5	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation
	MPA201T CourseCode	1 2 3 4	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems.
Analysis (Theory)		1 2 3 4 5 Course Outcome	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation
Analysis (Theory) Course		1 2 3 4 5 Course Outcome	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome
Analysis (Theory) Course Modern Bio-Analytical Techniques	CourseCode	1 2 3 4 5 Course Outcome Number	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to
Analysis (Theory) Course		1 2 3 4 5 Course Outcome Number 1	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to Perform extraction of drugs and metabolites from biological samples and validation of bio-analytical methods
Analysis (Theory) Course Modern Bio-Analytical Techniques	CourseCode	1 2 3 4 5 Course Outcome Number 1 2	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to Perform extraction of drugs and metabolites from biological samples and validation of bio-analytical methods Know factors affecting bioavailability, transport models and permeability methods.
Analysis (Theory) Course Modern Bio-Analytical Techniques	CourseCode	1 2 3 4 5 Course Outcome Number 1 2 3	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to Perform extraction of drugs and metabolites from biological samples and validation of bio-analytical methods Know factors affecting bioavailability, transport models and permeability methods. Understand drug interactions, microsomal assays and toxicokinetics; and applications of LC-MS in bioactivity screening and proteomics.
Analysis (Theory) Course Modern Bio-Analytical Techniques	CourseCode	1 2 3 4 5 Course Outcome Number 1 2 3 4	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to Perform extraction of drugs and metabolites from biological samples and validation of bio-analytical methods Know factors affecting bioavailability, transport models and permeability methods. Understand drug interactions, microsomal assays and toxicokinetics; and applications of LC-MS in bioactivity screening and proteomics. Know cell culture techniques, cell viability assays and flow cytometry.
Analysis (Theory) Course Modern Bio-Analytical Techniques (Theory)	CourseCode MPA202T	1 2 3 4 5 Course Outcome Number 1 1 2 3 4 5 Course Outcome	Understand the basic principles of HPLC and applications of HPLC. Understand the chromatographic techniques like size exclusion, ion exchange, ion pair, affinity, gas and HPTLC. Know basic concepts about SFC, CE and CE-MS hyphenation. Understand the principles of mass spectroscopy, different ionization techniques, mass analysers and MS/MS systems. Understand the NMR spectroscopy, 2D NMR techniques and LC-NMR hyphenation Course Outcome Upon completion of the course student will be able to Perform extraction of drugs and metabolites from biological samples and validation of bio-analytical methods Know factors affecting bioavailability, transport models and permeability methods. Understand drug interactions, microsomal assays and toxicokinetics; and applications of LC-MS in bioactivity screening and proteomics. Know cell culture techniques, cell viability assays and flow cytometry. Expalin Metabolite identification by microsomal approaches and drug product performance

Quality Control and Quality	MPA203T	2	Know cGMP guidelines in accordance to USFDA including CDER, CBER, PIC, WHO, EMEA for industrial management and CPCSEA guidelines.		
Assurance (Theory)	ssurance (Theory)	3	Understand detailed analysis of raw materials, IPQC, finished products and developing specifications according to ICH Q6 and Q3.		
		4	Know characteristic documentation in pharmaceutical industry		
		5	Understand clear perspective of manufacturing operations and controls.		
Course	CourseCode	Course Outcome Number	Course Outcome		
			Upon completion of the course student will be able to		
Herbal and Cosmetic Analysis (Theory)	MPA204T	1	Learn about the Quality control of crude drugs		
		2	Understand the advanced analytical methods for estimation of adulterants and deterioration of herbal drugs		
		3	Understand the process of detection of herbal drugs and monographs of herbal dugs		
		4	Know very well about herbal drug- drug interactions		
		5	Know about the evaluation of cosmetic products		
Course	CourseCode	Course Outcome Number	Course Outcome		
			Upon completion of the course student will be able to		
		1	Know comparison of absorption spectra by UV and Wood ward – Fiesure rule and Interpretation of organic compounds by FT-IR		
		2	Know Interpretation of organic compounds by NMR and MS		
		3	Understand determination of purity by DSC in pharmaceuticals and		
Pharmaceutical Analysis	MPA205PA	3	Identification of organic compounds using FT-IR, NMR, CNMR and Mass spectra		
Practical III (Practical)	MI A2051 A	4	Perform bio molecules separation utilizing various sample preparation techniques and quantitative analysis of components by gel electrophoresis and HPLC techniques		
		5	Perform Isolation of analgesics from biological fluids (Blood serum and urine).		
		6	Know protocol preparation and performance of analytical / bioanalytical method validation, and protocol preparation for the conduct of BA/BE studies according to guidelines		
	MPA205PB				Upon completion of the course student will be able to
		1	Perform in process and finished product quality control tests for tablets, capsules, parenterals and creams		
Pharmaceutical Analysis		2	Perform quality control tests for primary and secondary packing materials, and assay of raw materials		
Practical IV (Practical)		3	Know testing of related and foreign substances in drugs and raw materials, and preparation of Master Formula Record and Batch Manufacturing Record		
		4	Perform quantitative analysis of rancidity in lipsticks and hair oil, and determination of aryl amine content and Developer in hair dye		
		5	Know determination of foam height and SLS content of Shampoo, and determination of total fatty matter in creams		
		6	Know determination of acid value and saponification value, and determination of calcium thioglycolate in depilatories		
Course	CourseCode	Course Outcome Number	Course Outcome		
			Upon completion of the course student will be able to		
		1	Improve Oral and written communication skills.		
		2	Explore an appreciation of theself in relation to its larger diverse social and academic contexts.		
Saminan/Assistment		3	Understand and discuss current, real-world issues		
Seminar/Assignment		4	Introduce to different types of scholarly sources and how to access them		
		5	Provide with preliminary skills to do further research in the field of international relations		
		6	Know how to break down a piece of writing into its component parts and analyze the arguments		
		7	Give the opportunity to read in depth on a topic and understand how different pieces of scholarship are engaged in conversation with one another.		
Course	CourseCode	Course Outcome Number	Course Outcome		

			M.Pharm III SEMESTER
search Methodology and Biostatist		1	Understand the concepts of Reaeserch and types of study designs
	MRM301T	2	Summarize the concepts of Sampling techniques and hypothetical calculations
		3	Discuss the concepts of values in medical ethics
		4	Understand the concepts of CPCSEA and SOPS's
		5	Summarize the principles and Declarations of Helsinki
